## TECHNICAL SPECIFICATIONS

## ENDA ETS1410 PULSE INPUT TACHOMETER

Thank you for choosing ENDA ETS1410 TACHOMETER.

## * 35x77 sized. <br> * Easy to use.

* Decimal point can be adjusted..
* Process value can be devided by a value
between 1 and 999
* Sampling time is selected automatically according to input frequency. Sampling time is
between 1 and 16 s .
* CE marked according to European Norms.

Order Code : ETS1410- $\qquad$
Supply Voltag
$230 \mathrm{VAC} . .230 \mathrm{~V}$ AC
24VAC..... 24 V AC
SM............9-30V DC / 7-24V AC

## CONNECTION DIAGRAM

ENDA ETS1410 is intended for installation in control panels. Make sure that the device is used only for intended purpose. The electrical connections must be carried on by a qualified staff and must be according to the relevant locally applicable regulations. During an installation, all of the cables that are connected to the device must be free of energy. The device must be protected against inadmissible humidity, vibrations, severe soiling and make sure that the operation temperature is not exceeded. The cables should not be close to the power cables or components.

ENDA INDUSTRIALELECTRONICS
ETS1410-230VAC DIGITAL TACHOMETER

ENDA industrialelectronics ETS1410-24VAC DIGITAL TACHOMETER

Equipment is protected throughout by DOUBLE INSULATION.
$\theta$ Holding screw $0.4-0.5 \mathrm{Nm}$

Note : 1) Mains supply cords shall meet the requirements of IEC 60227or IEC 60245.
2) In accordance with the safety regulations, the power supply switch shall bring the identification of the relevant instrument and it should be easily accessible by the operator.

Ambient/storage temperature $0 \ldots+50^{\circ} \mathrm{C} /-25 \ldots+70^{\circ} \mathrm{C}$ (with no icing)

| Max. relative humidity | $80 \%$, up to $31^{\circ} \mathrm{C}$ decreasing linearly $50 \%$ at $40^{\circ} \mathrm{C}$ |  |
| :--- | :--- | :--- |
| Rated pollution degree | According to EN 60529 | Front panel <br> Rear panel$:$ IP65 |
| Height | Maximum 2000m |  |

\. Do not use the device in locations subject to corrosive and flammable gasses.
ELECTRICAL CHARACTERISTICS

| Supply voltage | 230V AC $+10 \%-20 \%$ or 24 V AC $\pm 10 \%, 50 / 60 \mathrm{~Hz}$ or optional 9-30V DC / 7-24V AC $\pm 10 \%$ SMPS module |
| :---: | :---: |
| Power consumption | Max. 2VA |
| Wiring | $2.5 \mathrm{~mm}^{2}$ screw terminal connection |
| Display | 4 digits, $9.1 \mathrm{~mm}, 7$ segment red display LED. |
| Accuracy | 0,01\% |
| EMC | EN 61326-1: 1997, A1: 1998, A2: 2001 (Performance criterion B is satisfied for EMC tests.) |
| Safety requirements | EN 61010-1: 2001 (pollution degree 2, over voltage category II, measurement category I) \ ETS1410 must not be used in location where measurement category is II, III or IV. |

| INPUTS |  |
| :---: | :---: |
| Sensor input | 5 to 30 V pulse |
| Measurement frequency | The device measures frequencies between 0.07 and 3000 Hz . |
| Sampling time | Automatically adjusted according to input frequency. Minimum: 1s, Maximum: 16s |
| OUTPUT |  |
| Auxiliary supply output | 12V DC, Max. 30mA (unregulated) |
| HOUSING |  |
| Housing type | Suitable for flush-panel mounting. |
| Dimensions | W77xH35xD71mm |
| Weight | ETS1410 : Approx. 200 g (after packing the device) |
| Enclosure material | Self extinguishing plastics |

## DIMENSIONS

For removing mounting clamps:
Push out the flush-mounting clamp in direction 1 as shown in the figure below. Then, pull out the clamp in direction 2.

Flush mounting
Depth

Flush moun
clamp

Flush mounting
Panel cut-out
Note :1) Panel thickness should be maximum 7 mm
2) If there is no 60 mm free space at the back side of the device, it would be difficult to panel

## Error messages:

## ■.I. In Input frequency is too low or there is no signal.

EFMI
Input frequency is too high.

Measured value is greater than 9999

## EXAMPLES FOR USING DIVISOR PARAMETER

ENDA ETS1410 Pulse Input Tachometer divides the number pulses in one minute by the calibration value and then, the result is displayed. Calibration value may be selected between 1 and 999. This feature is used for precise revolution speed, line speed or sudden flow speed measurements.
Calibration value is calculated as explained below:

$$
\mathrm{CAL}(\text { divisor value })=\frac{\text { Number of pulses per minute }}{\text { Desired value on the display }}
$$

## Divisor value for line speed measurement;

Assume that a cylinder having a circumference of 25 cm rotates at a speed of 3 revolutions $/$ minutes. And the line speed of a band moving on the cylinder is going to be calculated in the unit of $\mathrm{cm} /$ minute. And, a 50 pulse/revolution encoder is used for measuring the revolution speed of the cylinder. Dividing value is calculated as below;

Desired value on the display: 3 revolution/minute $\times 25 \mathrm{~cm} /$ revolution $=75 \mathrm{~cm} /$ minute
Number of pulses per one minute: 3 revolution/minute $\times 50$ pulse/evolution $=150$ pulse/minute

Then; CAL(divisor value) $=\frac{150 \mathrm{pulse} / \text { minute }}{75 \mathrm{~cm} / \text { minute }}=2$
